Individually Wrapped Coil Spring Unit with Clinically Tested Spinal Zone®

800 individually wrapped coil springs (queen density) move independently and adjust instantly to your sleep movements, actively comforting and supporting your body. This helps prevent partner disturbance and roll-together, and individually wrapped coil spring units are naturally quieter which adds up to an undisturbed night's sleep. Spinal Zone® clinical testing, performed by the Director of Human Performance at the University of West Virginia, revealed a 29% improvement in sleep quality, 34% reduction in back pain, and 96% reduction in back stiffness.

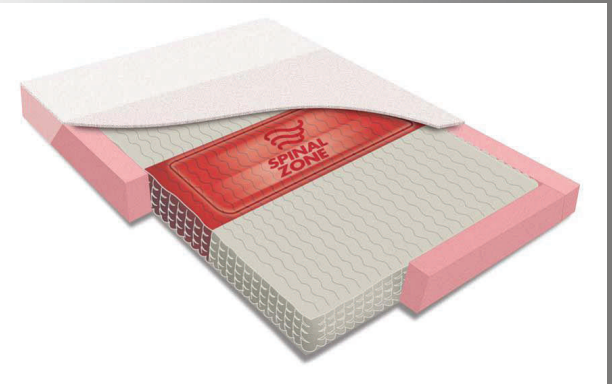

Tencel® High Performance Fabric

Pleasantly cool to the skin, it naturally absorbs moisture and quickly releases it again which guarantees a pleasantly dry sleeping climate.

Gel-Infused Foam Layer

Gel infused foam helps maintain your body temperature for a deeper sleep. It's designed to absorb and distribute pressure.

Superior Foam Encasement

Provides the maximum edge-to-edge sleeping surface along with a resilient seating edge.
