

Hybrid Technology

The best of both worlds, our hybrids combine the favorable aspects and benefits of gel infused foam with the cooling, comfort, and support of individually wrapped coil spring units.

Ultra Plush Stretch Cover

Ultra plush stretch cover is quilted to quilting foam and gel-infused quilting foam for a luxurious and supportive sleeping surface. **Gel infused foam** helps maintain your body temperature for a deeper sleep, and is designed to absorb pressure and distribute heat.

Memory Comfort Foam

Open-celled visco-elastic memory foam that gives superior response to your shape and body temperature to reduce pressure points.

Foam-Encased Fabric Wrapped Spring Unit with Perm-a-lator®

800 fabric wrapped coils (queen density) move independently for extra comfort and support. This helps prevent partner disturbance and roll-together, and wrapped spring units are naturally quieter for an undisturbed and more peaceful night's sleep. **Perm-a-lator®** center posture grid provides increased support in the vital lumbar back area.
