Individually Wrapped Coil Spring Unit

800 individually wrapped coil springs (queen density) move independently for extra comfort and support. This helps prevent partner disturbance and roll-together, and wrapped coil units are naturally quieter and sleep cooler which adds up to an undisturbed night's sleep. The coils adjust instantly to your sleep movements, comforting and supporting your body actively as you dream.

Gel-Infused Foam Comfort Layer

Gel infused foam helps maintain your body temperature for a deeper sleep. It's designed to absorb and distribute pressure.

Convoluted Foam Comfort Layer

Convoluted foam provides a comfortable, body-conforming feel while improving air circulation in the foam layers.

Superior Foam Encasement

Provides the maximum edge-to-edge sleeping surface along with a resilient seating edge.
